Skybirds Website: All Issues

Every known issue across the user website, admin panel and API in one list, most serious first · 29 October 2026

52 issues are open and 1 is fixed. Each line gives the one-step fix. Full explanations and screenshots are in the **Skybirds Issues Report**, under the same IDs. NEW marks issues added in the 29 October 2026 review.

4	8	16	24	1
Critical	High	Medium	Low	Fixed

Open issues by app	Critical	High	Medium	Low	Total
API	4	6	9	11	**30**
User site	2	2	6	11	**21**
Admin	1	2	1	2	**6**

An issue that touches two apps is counted in both.

Critical CRITICAL 4 issues

ID	Issue	App	Where	Fix
C1	**Lessons stop playing after about 5 minutes** UPDATED	API + User site	`skybird-api/services/playbackService.js:10`	When the player gets a 410 error, fetch a new token and resume at the same second (both hls.js and the Safari path). Short term: set `PLAYBACK_TOKEN_TTL_SECONDS` to 1800 or more.
C2	**Lesson videos missing on the server**	API	`skybird-api/private-videos/hls/`	Attach a persistent disk and point `VIDEO_STORAGE_PATH` at it, or move videos to S3/R2 or a video service. Re-upload any missing lessons.
C3	**A student can pay and not get the course**	API + User site	`skybird-api/controllers/paymentController.js:141`	Add a signed Razorpay webhook (`order.paid`) that runs the same grant logic, and store each payment in a `Payment` collection.
C4	**Admin login shows the default password** UPDATED	Admin + API	`skybird-admin/src/pages/Login.jsx:8, 89`	Remove the pre-fill and the hint, and change any admin password that is still `admin123`.

High HIGH 8 issues

ID	Issue	App	Where	Fix
C5	**Long video uploads time out**	API + Admin	`skybird-api/controllers/adminController.js:57`	Return the videoId immediately, convert in the background (one at a time), and let the admin panel poll for "processing / ready / failed".

ID	Issue	App	Where	Fix
C6	**OTP limit shared by the whole site behind a proxy** UPDATED	API	`skybird-api/middleware/rateLimit.js:5`	Set `TRUST_PROXY=true`, allow at most one OTP per number per 60 s, and key the general API limit on the visitor only, not the path.
C8	**Payment taken but not yet "captured" gives no access** NEW	API	`skybird-api/controllers/paymentController.js:236-246`	Accept `authorized` and capture it from the server, or rely on the C3 webhook (`payment.captured` / `order.paid`) to grant access.
C9	**Admin "main course video" upload is thrown away** NEW	Admin + API	`skybird-admin/src/pages/CourseForm.jsx:235, 406`	Remove the main-video upload from the form (lessons already cover it), or add it to the schema and the allowed fields.
C10	**Testimonial videos blocked on the live HTTPS site** NEW	API	`skybird-api/controllers/testimonialController.js:12, 28`	Set `TRUST_PROXY=true` (also needed for C6), or return a relative path like `/api/testimonials/<id>/master.m3u8` and let the frontend add the API address.
B1	**CORS lets every website call the API**	API	`skybird-api/server.js:48`	Remove `|| origin` and list the exact origins without a trailing slash (main site, www, admin).
F1	**An expired session still looks logged in**	User site	`user-frontend/src/api/axios.js:20`	On 401, call `logout()` from UserContext and redirect to `/login`.
F2	**Expired session tells paying students they own nothing**	User site	`user-frontend/src/pages/Dashboard.jsx`	Handled by F1; also show an error state when loading purchases fails.

Medium MEDIUM 16 issues

ID	Issue	App	Where	Fix
B2	**Coupon usage limits can be exceeded**	API	`services/couponService.js:75-83`	Reserve the use at order creation with a conditional update (`usedCount < usageLimit`).
B3	**Deleted lessons keep their video files forever** UPDATED	API	`controllers/adminController.js:447-476`	When a lesson is removed or replaced, delete its folder if no other course or testimonial uses it.
B4	**Deleting a customer erases their purchase history**	API	`controllers/adminController.js:553`	The `Payment` collection from C3 keeps them; consider blocking customers instead of deleting them.
B5	**No automated tests**	API	`whole repo`	Add `node:test` + supertest tests for verify (bad signature, wrong user, success once) and playback (non-owner gets 403).
B10	**Secrets and docs** UPDATED	API	`skybird-api/.env`	Rotate the keys if they were shared; update the README; add a `.env.example` with no real values.

ID	Issue	App	Where	Fix
B11	**File-upload library has known security flaws** NEW	API	`skybird-api/package.json`	Upgrade to `multer` 2.x and re-test the course, thumbnail and testimonial uploads.
B12	**100% coupons and free courses can't be used** NEW	API	`controllers/paymentController.js:94`	When the amount is 0, grant access directly (no Razorpay order); otherwise block 100% coupons and ₹0 prices in the admin panel.
B13	**Thumbnail uploads are loosely checked and lost on redeploy** NEW	API	`routes/admin.js:82-97`	Accept only images up to 8 MB on that field, store thumbnails in Cloudinary (already used elsewhere), and ignore `uploads/`.
B14	**Resetting a password doesn't log out other sessions** NEW	API	`controllers/authController.js:303-335`	Store a `passwordChangedAt` (or token version) on the user and reject tokens issued before it.
F3	**Login doesn't return you to where you were** UPDATED	User site	`user-frontend/src/pages/Login.jsx:41, 113, 134`	`navigate(from || res.redirectTo)`.
F4	**Video player reads the API address differently**	User site	`ProtectedVideo.jsx:6`	Use `API.defaults.baseURL`; add `.env.production`.
F5	**`/payment/success` is a fake page**	User site	`user-frontend/src/pages/PaymentSuccess.jsx:8, 31, 42`	Delete the page (and `/payment/failure`), or show real data from the order.
F10	**Admin thumbnails point to localhost**	Admin	`skybird-admin/src/pages/Courses.jsx:102`	Build the address from `VITE_API_URL`.
F12	**Students who own a course can be sent to the buy page** NEW	User site	`user-frontend/src/pages/Watch.jsx:171`	Wait for the purchase list to finish loading before deciding, or let the playback API's 403 decide.
F13	**A lesson-style video is publicly downloadable** NEW	User site	`user-frontend/public/assets/Mod_1_Part_1_Enhanced.mp4`	Confirm it's meant to be a free preview; if not, replace it with a short trailer. Delete the unused PNG copies.
V1	**Logged-in name in the navbar almost invisible**	User site	`user-frontend/src/components/Navbar.jsx:93-97`	Use `text-white` / `text-white/70`.

Low LOW 24 issues

ID	Issue	App	Where	Fix
B6	**Admin dashboard loads every user**	API	`controllers/adminController.js:585`	Count with a MongoDB aggregate using `$size`.
B7	**Upload limit silently capped at 2 GB**	API	`middleware/upload.js:39`	Set `.env` to the real limit.

ID	Issue	App	Where	Fix
B8	**If Cloudinary fails, thumbnails are stored inside the course**	API	`controllers/adminController.js:34-41`	Return an error instead.
B9	**Dead code and unused packages**	API	`package.json`	Delete them (about 60 lines and 2 dependencies).
B15	**OTP endpoint reveals which numbers are registered** NEW	API	`controllers/authController.js:134-141`	Accept as a known trade-off of the login design, or keep the per-number limit from C6 tight to slow it down.
B16	**Login token accepted from the URL** NEW	API	`controllers/courseController.js:19-21`	Accept the login token only from the `Authorization` header.
B17	**Database queries accept operator objects** NEW	API	`controllers/courseController.js:44-45`	Turn on Mongoose `sanitizeFilter`, or convert these values to strings before querying.
B18	**A failed video file read can crash the API** NEW	API	`controllers/videoController.js:66, 79`	Use `stream.pipeline` or add an `error` handler that ends the response.
B19	**Course update can wipe all lessons** NEW	API	`controllers/adminController.js:290-304`	Start from the course's current lessons when no list is sent, or remove video upload from this endpoint.
B20	**Coupon edits skip validation** NEW	API	`controllers/couponAdminController.js:190-273`	Run the same checks as create, and return a clear message for a duplicate code.
B21	**Video playlist describes the stream wrongly** NEW	API	`services/videoService.js:66, 85-88`	Write the real resolution and the matching codec string (`avc1.4d4028`), or encode at level 3.1.
F6	**Bad lesson link shows an error** UPDATED	User site	`user-frontend/src/pages/Watch.jsx:127-132`	Fall back to `course.videos[0]`.
F7	**Unknown URLs silently go to the home page**	User site	`user-frontend/src/App.jsx:70`	Add a simple 404 page with links.
F8	**Footer links incomplete**	User site	`user-frontend/src/components/Footer.jsx:159-162`	Add Courses; show "My Dashboard" when logged in.
F9	**Tab titles don't change on some pages**	User site	`user-frontend/src/components/SiteSEO.jsx`	Set a title per page.
F11	**Admin login shows a blank page to logged-in admins** UPDATED	Admin	`skybird-admin/src/pages/Login.jsx:14-18`	Restore the redirect.
F14	**Admin panel deployment settings** NEW	Admin	`skybird-admin/ (no vercel.json)`	Add the same `vercel.json` rewrite (or the host's equivalent) and a `.env.production`.

ID	Issue	App	Where	Fix
V2	**Floating buttons cover the mobile menu**	User site	`user-frontend/src/components/FloatingContactButtons.jsx`	Lower their z-index below the drawer, or hide them while the menu is open.
V3	**Course card text**	User site	`user-frontend/src/components/CourseCard.jsx`	Pluralise the label; remove the stars or use real ratings.
V4	**Courses page promises courses that don't exist**	User site	`user-frontend/src/pages/Courses.jsx`	Update the text, or hide it until those courses exist.
V5	**Stray quote marks in the payment window** NEW	User site	`user-frontend/src/components/PaymentModal.jsx:292-295`	Remove the quote characters from the text.
M1	**React error on every page**	User site	`user-frontend/src/components/HomeVideo.jsx:274`	Move those styles to `index.css`.
M2	**Site content fetched up to 7 times**	User site	`Home, Footer, SiteSEO, Contact, About, PrivacyPolicy, Terms`	Load it once in a shared context.
M3	**Unused frontend files** UPDATED	User site	`src/components/Home/*`	Delete them.

Fixed FIXED 1 issue

ID	Issue	App	Where	Fix
C7	**Wrong video folder in .env**	API	`skybird-api/.env:26`	Done. Restart the API.
